                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polynucleotide encoding a polypeptide with biological activity. The polynucleotides and polypeptide are useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polynucleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elacit immune response. The polypeptides are useful for raising antibodies, as markers for tissues in which the useful for raising polypeptide, as expressed, for re-engineering damaged or diseased tissues, for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or regeneration, in wound healing, in tissue repair and replacement, in present sequence represents the amino acid sequence of a novel human polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                    The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a ABB90749, ABB90713, ABB90730, ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour growth, necanglogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and refine are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL91996-ABL92041 and ABL92141-ABL92191; normal endothelial markers (NEM) ABL92042-ABL92041 and ABL92191-10 inormal (PEM) ABL91903-ABL91995
                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                     562
                                                                                                                                                                                                                                                                                                                                                                                          120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 622
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          241 SVPEISSSQHPVKTGLSDAFMILNPSPDVPESRRRSIFEYHRIELDPSKVTSMSAVEFTP 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified human transmembrane protein, designated as tumor endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (FEM), normal endothelial marker (FEM), normal polymucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour andiogenesis, for for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention

The polynucleotides and polypeptides are useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polynucleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elicit immune response. The polypeptides are useful for raising antibodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering damaged or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                  variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90732, ABB90749, ABB90749, ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour growth, neoangiogenic activity. They are useful for inhibiting tumour growth, neoangiogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonuclectide sequences: tumour endothelial markers (TEM) ABL91996-ABL92041 and ABL92193-ABB92191; normal endothelial markers (TEM) ABL92042-ABL92074; and pan-endothelial markers (PEM) ABL91995

The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour growth, neoangiogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABB20775-ABB91141 and ABB90771-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endochelial markers (TEM) ABL92041-ABL92191, normal endothelial markers (NEM) ABL92042-ABL92074; and pan-endothelial markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             179

                                                                                                                                                                                                                                                                                           ઠે
                                                                                                                                                                                                                                                                                                                                                                                  ઠ
```

The present invention relates to a novel method for the isolation of endothelial cells (BCs), and the identification of genes expressed in normal and tumour BCs. Tumour endothelial marker (FEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human BCs. The human BC marker proteins and the

polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are aluseful for inhibiting neoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient, for identifying candidate drugs for treating tumours. The present sequence represents a mouse TEM protein

                                                                                                                                                                                                                                                     New purified human transmembrane protein, designated as tumor endothelial marker (TEM) 3, useful for detecting, diagnosing or treating tumors, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis or psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 299
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           359
                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (TEM), normal marker (DEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient, or for identifying candidate drugs for treating tumours. The present sequence represents a mouse TEM protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The invention provides novel human stem cell growth factor-like polypeptides and polymclocides encoding them. The polypeptides having stem cell growth factor-like activity, can be expressed by standard recombinant methodology. The polymcleotides and polypeptides can be used to induce differentiation of embryonic and adult stem cells to give rise to different cell types. They may also be used in the treatment of leukemia, hemophilia, and degenerative diseases like Alzhaimer's disease. They may also be utilized to generate new tissues and organs that may aid supplements in need of transplants. They can also be used as nutritional supplements. The present sequence represents a tumour endothalial marker in precein, homologous to a stem cell growth factor-like
                                                                                                                                                                                                               Stem cell growth factor-like polypeptide; leukemia; hemophilia; human; degenerative disease; Alzheimer's disease; untritional supplement; cytostatic; nootropic; neuroprotective; hemostatic; antisense-therapy; gene-therapy; tumour endothelial marker 7 precursor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ASRVVLSFDFPFYGHPLRQITIATGGFIFMGDVIHRMLTATQYVAPLMANFNPGYSDNST

```

The invention relates to a new isolated polypeptide, which has stem cell growth factor-like activity. The new polypeptide, the polymucleotide encoding this polypeptide, or the agonist of the polypeptide are useful for treating a subject in need of enhanced activity or expression of stem cell growth factor-like polypeptide. The antagonist of the polypeptide or

Example 4; Fig 2; 98pp; English.

```
the polynucleotide is useful for treating a subject in need to indicate the activity or expression of stem cell growth factor-like polypeptide. The new polypeptide or polynucleotide is particularly useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types. In particular, the polypeptide or polynucleotide is useful for treating leukaemia, haemophilia, osteoporosis, osteoparthritis, canaemia, tendonitis, carpal tunnel syndrome, autoimmune diseases (e.g. multiple sclerosis, systemic lupus erythematosus, graft-versus-host cisease or allergies), cancers or degenerative disease (e.g. Alzheimer's cisease, parkinnon's disease, huntington's disease (e.g. Alzheimer's clisease or allergies), thutington's disease or amyotrophic lateral collisease or canyotrophic lateral collisease or the treatment of these diseases. The new polypeptide or collinearing new tissues and organs that may aid patients in need of transplanted tissues. The polynucleotide may also be used in comparation of these diseases. The new polypeptide or plynucleotide is also useful in diagnostic or research methods. The correspondent sequence represents the human tumour endothelial marker 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

ubiquitin ligase Nedd4 - rat (fragment)

Uspecies: Rattus norvegicus (Norway rat)

C;Species: Rattus norvegicus (Norway rat)

C;Accession: 570642
